

White, 1708.

A New

ALMANACK.

For the Year of our Lord God,
1708.

And the Year from the World's
Creation, 5657.

Being the Bissextile, or Leap-Year.

Calculated for the Meridian

of Taddington in Bedfordshire, where the
Artick is elevated above the Ho-
rizon 52 Degrees and 8 Minutes, and
serve for all Parts of England,
with any sensible Error.

By Tho. White.

*Deus gloriam Dei, & opera mirabilia eius as-
tutis Firmamentum, Psal. 19. 1.*

Cum Privilegio.

L O N D O N :

by H. Clark, for the Company
of Stationers, 1708.

(12)

THIS VOLUME HAS A VERY
TIGHT BINDING AND WHILE
EVERY EFFORT HAS BEEN
MADE TO REPRODUCE THE
CENTRES, FORCE WOULD
RESULT IN DAMAGE.

The Characters of the Seven Planets.

☿ Mercury, ♃ Jupiter, ♄ Mars, ☉ Sol, ♀ Venus, ♁ Mer.
 ☾ Luna, ☊ Dragons head, ☋ Dragons tail.

The Characters of the five Aspects.

Conjunction, in the same Sign and degree.
 Sextile, when Planets are distant 60 deg. or 2 Signs.
 Quartile, when distant 90 deg. or 3 Signs.
 Trine, when they are distant 120 deg. or 4 Signs.
 Opposition, when distant 180 deg. or 6 Signs. A 2

Of the Eclipses this Year, 1708.

There will be presented this Year to the View of the Earth's Inhabitants four Eclipses, two of the Sun and as many of the Moon, whereof three of them will be visible in our *British* Isle, and they happen in this following Order.

The first is an Eclipse of the Sun, upon the 11th day of *March*, about 6 in the Morning, and in the very beginning of *Aries*, to us not visible.

The second is a visible Eclipse of the Moon, on the 15th of *March*, in 15 degrees of *Libra*, the beginning at 4 minutes past 4 in the Morning, the middle or greatest Obscuration at 32 minutes past 5, the end at 45 minutes past 6; the digits eclipsed will be 5 and 30 minutes.

The third Eclipse is of the Sun, on *September* the 3rd day; it begins about 7 in the Morning, and ends at continuing about 2 hours; about 6 digits eclipsed and visible.

The last is a small Eclipse of the Moon, on *September* the 18th in the Evening; it begins 2 minutes past 8 at Night, the middle 21 minutes past 9, the end at 22 minutes past 10, total duration 2 hours 2 minutes; the digits eclipsed will be 3 and 55 minutes.

The Planet *Venus* is our bright Evening Star from the beginning of the Year until the 20th of *August*, and after passing her Conjunction with the Sun, becomes our glorious Morning Star to the end of the Year.

January hath XXXI days.

Last Quarter the 3 day, 20 min. past 6 at Night.
 New Moon the 11 day, 4 min. past 11 at Night.
 First Quarter the 19 day, 24 min. past Noon.
 Full Moon the 26 day, 55 min. past 4 in the Morning.

TO Measure Timber and Board, the ordinary way now used amongst Carpenters in the Country, is by the Line of Numbers, commonly called *Gunter's Line*.

Board Measure.

As 12 is to the breadth in Inches: so the length in Feet, to the content in Feet.

Squared Timber 14 Inches on both sides, or any other equal Square.

As 12 Inches is to 14 Inches the breadth or side: so the length in Feet, to a fourth Number; and that fourth Number extended to the content in Feet.

A Square 14 Inches one side, and 9 Inches the other side, or any unequal Squared Timber.

As 12 Inches is to 9 Inches the breadth: so the depth 14 Inches to a fourth Number.

As 12 to this fourth Number, so the length in Feet to the content in Feet.

Round Timber.

As 42. 54, (the Circumference, in Inches that makes 1 Foot long, a Foot.) Is to the Circumference in Inches. So the length in Feet, to a fourth Number, and that fourth, to the content in Feet being extended.

But the usual way with Carpenters is, to girt about the middle, and take a fourth part thereof for the Square, and then measure it as Squared Timber by the Line. Note, that if the Compasses come off the Line, they must be set at the same point, on the Line at the other end of the Ruler, and always keep them forward the same way, according to the Proposition.

This Table shows the Interest of any sum of Money from 100 l. from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the greater exactness the penny is divided into 100 parts; so that 10 parts are a farthing, and 50 parts an half-penny, and 25 parts a farthing.

Example:

The Interest of 100 l. for six months one week and one day, is thus found by the Table.

Interest of 100 l. { for 6 mon. 03-0-0-00 }
 { for 1 week, 00-2-3-61 }
 { for 1 day 00-0-9-94 }
 03-02-3-55

A Table

A TABLE shewing how many Years Purchase a Lease or Annuity to endure for any Term of Years under 33, is worth presently at Interest upon Interest, at Six in the hundred; and shewing plainly how to Discount any Lease in Being, and the true Value of the Reversion, after any Number of Years.

The Use and Explanation of this TABLE.				The first Column towards the			
Years of Lease.	Years.	Months.	dec. par.	left hand,	sheweth the Years of a Lease or Annuity, and right against each Year, is the Years, Months, and Decimal Parts of a Month's Purchase, that such a Lease or Annuity is worth,	Years of a Lease.	Years.
1	0	11	0			17	10
2	1	9	9			18	10
3	2	8	1			19	11
4	3	5	9			20	11
5	4	2	5			21	11
6	4	11	0			22	12
7	5	7	0			23	12
8	6	2	5			24	12
9	6	9	6			25	12
10	7	4	3			26	13
11	7	10	7			27	13
12	8	4	6			28	13
13	8	10	3			29	13
14	9	3	6			30	13
15	9	8	5			31	13
16	10	1	3			32	14

The first Column towards the left hand, sheweth the Years of a Lease or Annuity, and right against each Year, is the Years, Months, and Decimal Parts of a Month's Purchase, that such a Lease or Annuity is worth,

EXAMPLE.

Suppose a Lease or Annuity to continue ten Years, and you would know how many Years Purchase it is worth in present Money, look in the Table for ten Years of a Lease to the left hand, and against the same you shall find 7, 4, 3, which sheweth such a Lease to be worth seven Years, four Months, and three tenth Parts of a Month's Purchase.

Again, Are you take or buy the Reversion of any Lease or Annuity, work thus: Suppose the Lease to be thirty Years in all; you find in the second Table, and right hand against thirty, 13 Years 9 Months, and two tenth parts of a Month's Purchase; this it were worth, were it in present possession. But suppose there be a Lease of five Years (more or less) before yours commence; look in the Table against the five Years, and there you find four Years, two Months, five tenth parts, half a Month's Purchase; take this out of the sum against thirty, which is 13, 9, 2; 4, 2, 5; the remainder is nine Years six Months, seven tenth parts of a Month; and so much is the Reversion after five Years worth, the remainder of thirty Years. This is useful and very easy.

A Geographical Epitome of the MAP,
of England and Wales: wherein is shewed how
each Shire is bounded and joyned to each other, and
what Point of the Compass every County lieth from the Ho-
norable City of London: (being lately published) the
use of which is explained in the following Page

North:

South:

England is in	Length 989 Breadth 279 Compass 1532	Isle of Man is in	Length 28 Breadth 91 Compass 91
Wales is in	Length 308 Breadth 122 Compass 218	Isle of Anglesey is in	Length 27 Breadth 18 Compass 49

Miles

White.

The Explanation and Use OF THE MAP and TABLE.

First for the Map. The Figures in each Shire of the Map, are to shew you the names of every County, and the Letters in the same are for such uses as I will shew hereunder.

You must understand, that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, and the little black speck or spot therein, signifieth London. Now if you would readily finde the name of any Shire therein, and how many miles the middle of the said County (in a straight line) is from London, and what point of the Compass it lieth from the said City, resort then to the Table of Shires on the other side, and it will resolve you.

As for Example :

Yorkshire it hath the figures of 29 in the Map, and so to seek likewise in the Table; where is shewed that the middle of that Shire is 145 Miles from London in a straight line, and it lieth North from the City; and looking forward toward the right hand, it sheweth it hath one City, Forty Market Towns, Fourteen Castles, Four hundred fifty nine Parishes, Thirty six Rivers, and Seventy two Barres; and so of the rest.

The use of the Letters in the Map, is this;

S, signifieth part of Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard point, H Holy-head, the * the Irish Sea, B the British or English Sea, G the German Sea, R, Rarwick, D Dover, N Newcastle, C the Points of Compass, & the Scale of Miles by which you may measure the distance of any place; for every Black heave is five miles, so is every white.

The 29 Shires from Berwick to Yorkshire are the English Shires, and the other 23 from Anglesey to Radnorshire are Welsh.

It may be something curious in Miles to the middle of each Shire, by reason of the crookedness of the High-way, Wells, and Vallies; but what is here set down is meant in a straight line from London.

White.

To Measure Land by the Chain of ten Links to the Perch.

I Understand that many honest Country-men, could measure small Closes or pieces of Land, by casting them into Triangles or Squares, if their lengths, breadths, or perpendiculars would happen to be in even Perches, but if they have odd links in them, then they do not understand the way how to cast them up; therefore I will shew them how they shall perform the same.

Suppose there be a Close or piece of Land 35 Perches and 7 Links long, and 24 Perches and 6 Links broad, Multiply 35.7. the length, by 24.6 the breadth, as if they were whole Numbers, with a prick between the Perches and Links, and the product thereof will be 87822, which two last Figures in your product you must cut off, with a dash of your Pen, which are 22 square links towards another Perch, there being in one Perch 100 square links; the 878 in your product are Perches, and if the 878 be divided by 40, the Quotient will be 21, which are Roods, and 38 Perches, which long square doth contain 3 Acres 2 Roods, 38 Perches, and 22 square Links.

Example of the Multiplication:

If your length or breadth to be multiplied, were one of the given in Perches, the other in Perches and Links, then from the product thereof, you must cut off two last figures, which one figure will shew, so many tenth parts of a Perch. And if the length or breadth to be multiplied appear to have a half Link in either of them, then mayest add another, then half a Link in breadth, through every ten Perches in length, maketh one Perch of Land, which thou mayest add to thy product, &c.

$$\begin{array}{r}
 35. \\
 24. \\
 \hline
 87822
 \end{array}$$

Although there be several kinds of Triangles, I will therefore add one Rule for all which is general, Half the length of the Base being multiplied by the length of the Perpendicular, shall be equal to the Area of the Triangle.

Or half the length of the Perpendicular being multiplied by the whole Base, will be the content of the Triangle.

If a Close or piece of Land be broader at one end than at the other, add both the ends together, and take the half thereof for the breadth, which multiplied by the length, the Product sheweth the true Content.

White.

England containeth 2958460 Acres.

Scotland containeth 14432000 Acres.

Ireland containeth 800000 of Acres.

The 17 Provinces of the Low Countries contain in the whole, 10791090 Acres; whereas those under Spain, 2197000 Acres.

Those United under the States, 3599900 Acres.

France in its 32 Provinces containeth 82879000 Acres.

The Explanation of the following Table.

First, get a Chain or Cord of two perches in length, and divide each perch into 10 equal parts, which I call links, each of those parts will contain 19 inches and 8 parts of one inch: the inch divided into 16 parts, 15 of those links makes 16 feet and an half, our common perch statute measure: 100 square links make one perch of land, 40 square perches make one rod, 40 halban acre, 1220 three rods, and 160 square perches one acre.

This following Table doth contain 5 Columns: The first Column on the left hand sheweth the length of the Acre in perches and half perches; the figure of 5 under every length, signifieth 5 links, or half a perch forward. The other four Columns shew the breadth for one Acre: for first Perches, the second Links, the third Inches, the 4th Parts of one inch, the inch divided into 10 parts. And also in this last Column in many places of this Table, you will see a small Figure placed on the right hand of p, which is no more than one 10th part of an inch divided into 4 parts; and the true or nearest part I have observed.

Example: At 12 perches in length, the breadth will be 100 square perches, 3 links, 1 inch, and 5 parts of an inch, and 1 part of a fourth; which is a quarter of a tenth part. At 13 perches and an half in length, which is expressed by the figure of 5 under 13, you will finde the breadth 111 perches, 1 link, 10 inches, 2 parts and 3 quarters. A

A Table to set forth Acres:

Declaring the breadth for one Acre
for any length given in Perches, or in Half
Perches, from 10 to 80.

Exactly Calculated, by *Thomas White*, Surveyor.
